

3D PRINTER

TEST THE 3D PRINTER

Cost 600 to 1800      Still undecided 800 to 1200

maximum amount of deviation .2 not so good WOW .04 great

size of the objects      Stay on the larger size's if i can

Detail Resolution

Speed      Resolution is more important

Heated Platform

Print PLA and ABS      polycarbonite would be nice option

WOW Printing cost vary from 3.80 to .08 cents for a smart phone case

Duel Extruder      Do i need it ????

Wi-Fi connection would be nice but not needed

Touchscreen is a nice option

Help & Support      online forum      email address      telephone support

End use parts

printing jet or extruder METAL ?

Love the idea of a mini MILL that cuts metal and carbon fiber

When looking at technologies that claim numerous materials, pay particular attention to material waste that is generated during material change- over.

but slow down when additional parts are added to a print job or when the complexity and/or size of the geometries being printed increase

The best comparisons are visual inspection of parts produced on different technologies. Look for razor sharp edge and corner definition, minimum feature size, sidewall quality and surface smoothness.

Slow accurate Z so quality is good
