/**
 * Bed Skew Compensation
 *
 * This feature corrects for misalignment in the XYZ axes.
 *
 * Take the following steps to get the bed skew in the XY plane:
 * 1. Print a test square (e.g., https://www.thingiverse.com/thing:2563185)
 * 2. For XY_DIAG_AC measure the diagonal A to C
 * 3. For XY_DIAG_BD measure the diagonal B to D
 * 4. For XY_SIDE_AD measure the edge A to D
 *

```

```

* Marlin automatically computes skew factors from these measurements.
* Skew factors may also be computed and set manually:
*
* - Compute AB : SQRT(2*AC*AC+2*BD*BD-4*AD*AD)/2
* - XY_SKEW_FACTOR : TAN(PI/2-ACOS((AC*AC-AB*AB-AD*AD)/(2*AB*AD)))
*
* If desired, follow the same procedure for XZ and YZ.
* Use these diagrams for reference:

```

```

//#define SKEW_CORRECTION

#if ENABLED(SKEW_CORRECTION)
  // Input all length measurements here:
  #define XY_DIAG_AC 282.8427124746
  #define XY_DIAG_BD 282.8427124746

 * Clean Nozzle Feature -- EXPERIMENTAL
 *
 * Adds the G12 command to perform a nozzle cleaning process.
 *

```

\* Parameters:

\* P Pattern

\* S Strokes / Repetitions

\* T Triangles (P1 only)

\*

\* Patterns:

\* P0 Straight line (default). This process requires a sponge type material

\* at a fixed bed location. "S" specifies strokes (i.e. back-forth motions)

\* between the start / end points.

\*

\* P1 Zig-zag pattern between (X0, Y0) and (X1, Y1), "T" specifies the

\* number of zig-zag triangles to do. "S" defines the number of strokes.

\* Zig-zags are done in whichever is the narrower dimension.

\* For example, "G12 P1 S1 T3" will execute:

\*

\* --

\* | (X0, Y1) | ^ ^ ^ | (X1, Y1)

\* | | / \ / \ / \ |

\* A | | / \ / \ / \ |

\* | | / \ / \ / \ |

\* | (X0, Y0) | / v v \ | (X1, Y0)

\* -- +-----+

\* |\_\_\_\_\_|\_\_\_\_\_|\_\_\_\_\_|

\* T1 T2 T3

\*

\* P2 Circular pattern with middle at NOZZLE\_CLEAN\_CIRCLE\_MIDDLE.

\* "R" specifies the radius. "S" specifies the stroke count.

\* Before starting, the nozzle moves to NOZZLE\_CLEAN\_START\_POINT.

\*

\* Caveats: The ending Z should be the same as starting Z.

\* Attention: EXPERIMENTAL. G-code arguments may change.

/**
 * RGB LED / LED Strip Control
 *
 * Enable support for an RGB LED connected to 5V digital pins, or
 * an RGB Strip connected to MOSFETs controlled by digital pins.
 *
 * Adds the M150 command to set the LED (or LED strip) color.
 * If pins are PWM capable (e.g., 4, 5, 6, 11) then a range of
 * luminance values can be set from 0 to 255.
 * For Neopixel LED an overall brightness parameter is also available.
 *
 * *** CAUTION ***

```

- \* LED Strips require a MOSFET Chip between PWM lines and LEDs,
- \* as the Arduino cannot handle the current the LEDs will require.
- \* Failure to follow this precaution can destroy your Arduino!
- \* NOTE: A separate 5V power supply is required! The Neopixel LED needs
- \* more current than the Arduino 5V linear regulator can produce.
